Avetta

What if you had better insight into which contractors are capable, reliable, and safe?

Avetta's industry standard APIs, make the information you have access to available to other key systems, quickly and simply.

The Case for API Integration

Share data between systems

Automated data transfers without the security concerns

Timely updates of mission critical data points

Customise workflows and data processing

Greater interoperability

Check and validate data between and across all your systems

How Avetta Connects

Secure API Key Authentication

2-Way, on demand Data Updates

REST API Standard Protocol Architecture

API documentation, sandbox environment and tech help

Common Use Cases

Use Cases	Description
Vendor Onboarding	Connect new suppliers straight from your procurement system without manual processes and hand-offs.
Data Validation	Compare supplier data from Avetta with other key systems to provide accuracy and consistency.
Business Analytics	Combine the data in Avetta with data from other systems to gain real insights into your supply chain and workforce.
Procurement	Sync supplier compliance statuses to internal systems to help manage purchasing decision making processes.
Worker Competence	Sync worker records with learning management systems to track learning and development goals.
Site Access	Send worker compliance status to time/attendance or access control systems to prevent unqualified workers from entering job sites.

Compliance

Real Clients.
Real Results.

How Yancoal Are Solving Key Pain Points
with Avetta APIs

Yancoal: Building a World-Class Mining Enterprise

Challenge:
Have a single platform to manage all workers (employees and contractor), for compliance and authorisation.

Solution:
Integrates key business systems to centralise employee, training, access and competency data.

Impact:
Streamlined operations, reduced duplication, and improved safety and compliance.

Problem

Teams have difficulties with data in their internal systems not matching records in Avetta, leading to duplication, errors and fragmented data. This causes confusion and results in delays and rework.

Employee Onboarding

Sync HRIS systems with Avetta to provide for automated, timely, accurate, duplicate-free worker record creation.

Tools	Data types
SAP Pegasus Workforce	• Worker details • Automated site association • Automated role assignment • Automated training enrolments

Problem

Regulatory compliance data lives in third-party systems, making it difficult for decision-makers to have a consolidated view of compliance.

Statutory Compliance

Tracking workers that are required to maintain competence in a role.

Systems

Data Types

- Statutory roles
- Progress to maintenance of competence

Problem

On the job assessment of competence is conducted using paper forms. Finalising, authorising, digitising and filing of completed paper assessments introduces delays in approvals of workers to undertake necessary roles.

Workplace Assessments

Streamline on the job verification of competence workflows.

Online Tools

ChekRite

Pegasus Workforce

Data

- Enrolments
- Assessment results
- Competency assignments
