Supplier Sustainability Risk Diagnostic

Turn supplier sustainability risk into a roadmap for action

The Supplier Sustainability Risk Diagnostic combines scalable analysis with ESG Risk Advisory expertise to identify potential risk across your broader supplier population — including suppliers outside the Avetta platform — and turn findings into practical action.

MAP

Risk visibility

See where potential sustainability risk is concentrated across your supplier base and build a clearer view of overall exposure.

PRIORITISE

Where to focus

Identify suppliers that may warrant deeper assessment, engagement or due diligence.

DECIDE

Next steps

Use executive ready insights and ESG Risk Advisory guidance to communicate risk, align stakeholders and support informed decisions.

COST ADVANTAGE

Comparable consulting-led assessments can require a six figure investment.

How the Supplier Sustainability Risk Diagnostic works

1. **Share your supplier list**
   Assess your broader supplier population, including suppliers outside the Avetta platform — not just those already onboarded.
2. **Assess key dimensions**
   Assess suppliers by industry, business activity and other relevant risk factors, using AI-assisted analysis to scale coverage.
3. **Apply topical risk flags**
   Surface potential exposure across relevant topics such as modern slavery and labor practices, GHG emissions, conflict minerals and more.
4. **Receive advisory-ready outputs**
   Get supplier level risk details and an executive summary, supported by expert ESG Risk Advisory guidance.

* Risk flags indicate areas for further investigation; they do not confirm supplier non-compliance.

A practical starting point for compliance

Regulations such as the EU Corporate Sustainability Due Diligence Directive (CSDDD) require companies to identify and prioritise adverse human rights and environmental risks across their supply chains. Mapping the supplier base — such as through this exercise — is often the first step. This type of risk-based view focuses due diligence where exposure is highest, then matures over time.

Value for clients and suppliers

For Clients

- Establish a baseline for supplier sustainability risk.
- Align procurement, sustainability and risk teams.
- Track priorities and program progress over time.

For Suppliers

- Understand how sustainability risk may appear to clients.
- Identify topics driving customer concern.
- Focus improvement efforts where they matter most.
