

Worksite Safety

Digitize Safety Workflows. Centralize Oversight. Improve Readiness.

Managing on-site risk often means juggling paper forms, scattered emails, and manual approvals. Without a centralized system, it's difficult to know if hazards have been properly identified, if safety forms are complete, or if workers are truly ready to work. These gaps can delay projects and increase risk exposure across your worksites.

Avetta's Worksite Safety brings every step of the safety workflow into one connected system. From work requests to on-site safety forms, clients can standardize hazard identification, form submission, and approvals — all on Avetta Connect™.

Benefits

- 1 Reduced Worksite Risk**
Identify and mitigate hazards before work begins with digital pre-job assessments and real-time visibility into worker and supplier readiness. Avetta helps prevent non-compliant entry and lower safety-related downtime by ensuring each job starts with suppliers ready to work safely.
- 2 Greater Operational Control**
Digitize safety documentation, approvals, and permits to eliminate manual tracking and fragmented processes. With centralized site-level oversight, you gain the control needed to keep projects moving safely and consistently across even the most complex work environments.
- 3 Stronger Safety Performance**
Maintain a single source of truth for all safety forms, approvals, and observations while enabling smarter coaching and post-job reviews. Avetta gives clients and suppliers shared visibility to drive accountability, elevate job quality, and strengthen long-term safety performance.

Up to 45%
Fewer non-compliant entries

40%
Less downtime from safety events

25-30%
Reduction in first-day injuries

Features

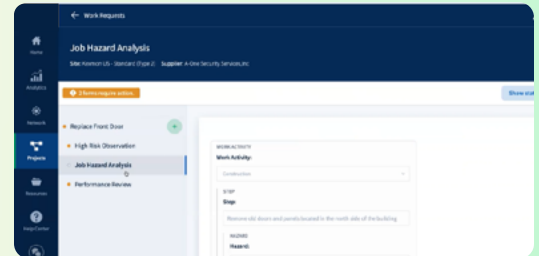

Digital Access Control

Digitally verify worker and supplier compliance before they step on site. Reduce non-compliant entry and strengthen worksite safety by ensuring only qualified, ready-to-work personnel gain access.

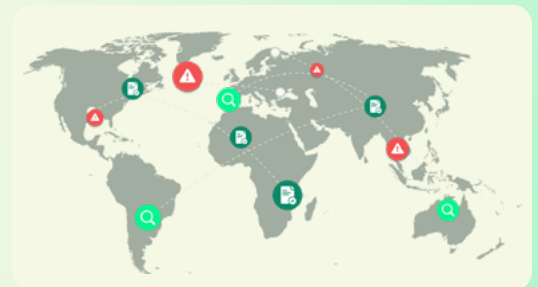

Site-Specific Safety Controls

Assign, track, and enforce tailored safety requirements for each site, project, and contractor role. Digitize job hazard analyses, risk assessments, and safe work method statements to identify risks early and align teams before work begins.

Real-Time Oversight & Performance Tracking

Gain site-level visibility into safety documentation, high-risk observations, and post-job performance. Capture issues as they arise, close gaps proactively, and use performance insights to improve future safety and sourcing decisions.

Smarter Work Request Scheduling & Reviews

Coordinate project work more efficiently with flexible scheduling tools and configurable review workflows. Clients and suppliers can prioritize tasks, manage approvals faster, and streamline work requests with sequential, non-sequential, and grouped review options.

Take control of worksite safety from pre-job assessments to post-job reviews.

Streamline workflows, reduce delays, and strengthen safety performance.
